

Julie,

Attached are my public comments on the suggested changes for Model Water Efficient Landscape Ordinance (MWELo).

In summary I think the suggested changes are great, and I added some additional ways, we as California residents can conserve water and build water reservoir through storm water harvesting. The public is behind these type of policies, just look at all the brown yards and succulents going in. It is good time to over compensate on conservation through the Model Water Efficient Landscape Ordinance (MWELo) than under perform.

Thank you,

Joseph Dominic Gallegos
